

## **Imaginative Resume Style**

This style is most effective for people who are seeking employment in technical fields that demand creativity, individuality, and the use of style. These fields could be graphic design, creative writing, marketing, public relations or architecture. Some employers prefer a more traditional or conservative approach to a resume. You should research the companies you have interest in and assess if they are open to creative resumes before using it. This type of resume can represent a “mini- portfolio” because it demonstrates layout, graphics, text integration, and audience selection. These resumes can be extremely impressive if they are well designed.
